THE EDITION

Inside the last 48 hours

Reports are kept close to their original sources. Dates, credits and links are preserved so every reader can follow the evidence.

01	APOD: 2026 October 31 – Night on a Spooky Planet	31 Oct 2026
02	NASA Releases MAX POWER Key Events for Media, Participants	30 Oct 2026
03	Space Crops and Advanced Tech Wrap Up Week Following Spacewalk	30 Oct 2026
04	NASA's James Webb Space Telescope Captures Eerie Cat's Head	30 Oct 2026
05	NASA’s James Webb Space Telescope Captures Eerie Cat’s Head	30 Oct 2026
06	NASA Explores Potential Commercial Servicing for Hubble Telescope	30 Oct 2026
07	November’s Night Sky Notes: Light-Day Away	30 Oct 2026
08	APOD: 2026 October 30 – Haunting the Cepheus Flare	30 Oct 2026

EDITOR'S NOTE

A short window on a moving universe

This edition gathers 8 source-linked reports published within the previous 48 hours. The Publisher collected the source records; the Universal Editorial Engine selected the eligible items, preserved their provenance and arranged them using this edition's brief. The summaries remain source-led. They do not replace the linked reporting, technical detail or stated limitations.

CUSTOM EDITORIAL REQUEST

Create a cinematic, image-led space journal with a dramatic editorial cover, clear story hierarchy, an explainer page, a timeline, source notes and a strong closing page. Use automatically screened NASA source-post imagery beside its originating factual stories and retain visible credits and usage notes.

APOD: 2026 October 31 – Night on a Spooky Planet

APOD Science APOD APOD: 2026 October 31 –… Today's APOD Archive Submissions Index Search Calendar RSS Education About Discuss APOD Astronomy Picture of the Day Discover the cosmos! Each day a different image or photograph of our fascinating universe is featured, along with a brief explanation written by a professional astronomer. Night on a Spooky Planet Explanation: What spooky planet is this? Planet Earth on a dark and stormy night, of course. The ghostly scene was photographed at Hverir , a geothermally active area found along northeastern Iceland's volcanic landscape . Triggered by solar activity , geomagnetic storms have unleashed energetic particles trapped in Earth's magnetic field. Penetrating the planet's upper atmosphere at high latitudes, the particles create auroral displays in the starry night sky. Ghostly towers of steam and gas are venting from local fumaroles to dance against the eerie, greenish northern lights. For now, auroral activity on planet Earth remains in a high state as the Sun is only in early phases of decline from the peak of its solar activity cycle . And soon, other ghostly apparitions may dance in your neighborhood. Happy Halloween ! NASA Releases MAX POWER Key Events for Media, Participants

NASA’s Freedom 250 F-5 team, including NASA Administrator Jared Isaacman, performs a flyover during the national anthem at an NFL game between the Cleveland Browns and the Carolina Panthers at Huntington Bank Field, Sept. 27, 2026, in Cleveland. Credit: NASA/Jordan Cochran America’s newest aerospace expo and air show – MAX POWER – is fast approaching, and NASA has announced key events beginning Friday, Nov. 6, and running through Sunday, Nov. 8, hosted on and near the agency’s Kennedy Space Center in Florida. Through multiple park experiences at MAX POWER , NASA and a variety of external collaborators will showcase the newest aircraft, autonomous vehicles, technologies, and more defining the future of air and space. NASA will display its quiet supersonic X-59 plane, and agency partners will showcase Moon rovers, spacecraft, and more. The expo also is a culmination of the agency’s recent Inspiration Tour , which included numerous flyovers to highlight NASA’s fleet of aircraft. A current schedule of events is available on the agency’s website . MAX POWER includes opportunities to meet leadership, astronauts, engineers, scientists, and other subject matter experts during the family-friendly public events with gates opening at 9 a.m. EST on Nov. 7 and Nov. 8. NASA also will share multiple news updates during the weekend, including hosting a news conference at 5 p.m. on Nov. 7, to provide its latest Moon Base update. Located near the lunar South Pole, the Moon Base is humanity’s first outpost for long-term lunar exploration. Live coverage of the news conference will stream on a variety of platforms …
